

meet the **enemy** within us

In 2005, **four out of five** persons **diagnosed with HIV** infection at the Anonymous Test Site were **MSMs**. **4.3%** of all MSM clients at the test site tested **positive for HIV**. 71 more MSMs were notified with HIV infection.

In the MSM community, the incidence of early infectious **Syphilis increased by 84%** and **Gonorrhoea by 64%**.

Sexually transmitted infections (STIs) among the MSMs are escalating and we are only seeing the tip of the iceberg.

Come and join us to find out more about how STIs affect you and most importantly, the precautions you need to take!

Dr Martin Chio, Associate Consultant Dermatologist from the National Skin Centre & DSC clinic will be our speaker.
